

Become a

EUROPEAN LIGHTING EXPERT

Have your knowledge certified by the only accreditation organisation in the field of light and lighting operating throughout Europe.

www.europeanlightingexpert.org

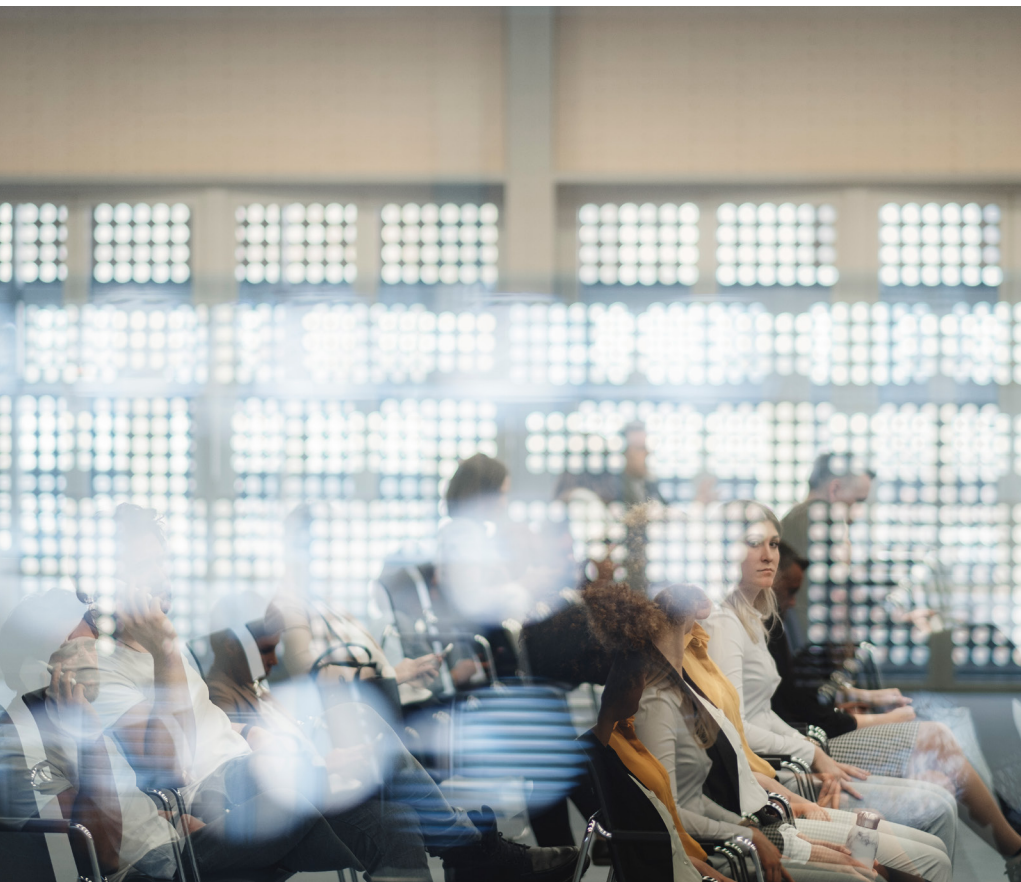

What is ELEA?

The national lighting societies of the countries listed on the back of this brochure are the driving force behind ELEA and its aim to establish and secure a uniform standard of education, knowledge and quality for people working in light and lighting throughout Europe and beyond. Because we believe that our quest for quality should not stop at the borders of Europe.

ELEA is an independent testing body that conducts examinations according to a unanimously defined taxonomy. Candidates can prepare for the examination in further education programmes of the national lighting societies and recognised partners.

The taxonomy mentioned above is regularly updated to ensure that European Lighting Experts are always up to date with the latest technologies, standards and laws as well as designer knowledge in the future.

What are the benefits of becoming an ELE?

Proof that you are an ELEA certified person working in light and lighting gives clients the confidence to work with someone who keeps up with technological, normative and design developments through continuous professional development.

This not only raises your profile with customers, companies and partners, but also facilitates access to interesting projects and exciting jobs in the European lighting industry.

As a European Lighting Expert (ELE), you have official confirmation of your high level of competence in the field of light and lighting.

Re-Registration

Every 5 years, a ELE must prove that their expertise is up to date in terms of technology and scientific knowledge. To do this, they have to demonstrate that their knowledge is up to date with the help of a points system.

What is a ELE?

A ELE is characterized by extensive knowledge, understanding and ability for the meaningful application of a wide range of skills from lighting technology and the lighting planning.

Ensuring the integral quality of a lighting design within the entire chain through certified subject matter experts. Combining the right dose of hard skills and soft skills is the primary task of a European Lighting Expert, by assisting parties in their search for the best lighting solution within a set framework.

Working within set frameworks guarantees no misunderstandings during the realization of a project and ensures a balance between the effectiveness and the costs of a lighting installation within a project.

Multidisciplinary thinking makes a European Lighting Expert a perfect partner for a successful project.
